

## **Test Guide Group C**

In order to proceed with the test with our subjects we are going to follow the next protocol:

1. First, the subjects will complete the survey before conducting the experiment (concealing the real goals of the experiment). All questions in the survey are mandatory but, the ones where we explicitly say “this is an optional question” will have a “i prefer to not say” option.
2. All the subjects will be tested in the MTG room using the same headphones and the same led screen.
3. Next, we will play a video divided in three parts. The first part will be two pairs of bright and dull sounds used to train the subject in order to know how clear they understand the concept of bright and dull sounds. In the video, we will pause after each pair of sounds. We will use this scale:

	Dull 1	Somewhat dull 2	Neither bright or dull 3	Somewhat bright 4	Bright 5
Sound 1 - Bright					
Sound 1 - Dull					
Sound 2 - Bright					
Sound 2 - Dull					
Sound 3 - Bright					
Sound 3 - Dull					
Sound 4 - Bright					
Sound 4 - Dull					

4. In the second part we will start the experiment without using any images, we just make the subject listen to the sound and see which ones they think are bright and which are not bright. After each sound is played, the video is paused in order to write down the subject's answers.
5. The third part of the videos contains both audio and video, after each pair of image and audio we will pause the video in order to write down the subject's answers.
6. End of the experiment.
